What is FEMA’s Process for Revalidating Existing LOMAs and LOMRs?

To revalidate map changes, FEMA conducts a detailed comparison of the BFEs shown on FEMA’s new FIRM and the lowest adjacent grade or lowest lot elevation of previously issued map changes. Those structures or properties that are above the BFE or are located in areas of the community that are not affected by updated flood hazard information are revalidated through a formal determination letter that is issued to the community’s Chief Executive Officer when the new FIRM becomes effective. The revalidation letter is also mailed to each community’s map repository to be kept on file and is available for public reference. Map changes that have been issued for multiple lots or structures where the determination for one or more of the lots or structures have changed cannot be automatically revalidated through the administrative process described above. To request that FEMA review such map changes (i.e., those that are not included in the revalidation letter), please submit the following to FEMA:

- A letter requesting the re-issuance (provide the case number of the LOMA to be reissued); and
- A copy of the LOMA to be reissued, if available.

FEMA will review the case file and issue a new letter reflecting its new determination.

How can I purchase flood insurance?

A policy may be purchased from any licensed property insurance agent or broker who is in good standing in the State in which the agent is licensed or through any agent representing a Write Your Own (WYO) company. Call 1-800-720-1093 or visit floodsafe.gov to find a flood insurance agent near you.

What Factors Determine Flood Insurance Premiums?

A number of factors are used to determine flood insurance premiums, including the amount of coverage purchased, the deductible, location, age, occupancy, and type of building. For newer buildings in floodplains, the elevation of the lowest adjacent grade (the lowest ground touching the structure), or lowest floor relative to the BFE will also be used to rate the policy.

For Further Information

For any questions concerning flood hazard mapping or LOMAs, please contact the FEMA Map Information eXchange’s (FMIX) toll-free information line at 1-877-FEMA MAP (1-877-336-2627).

More information is available online at: [http://www.fema.gov/plan/prevent/fhm/fq_genhm.shtml](http://www.fema.gov/plan/prevent/fhm/fq_genhm.shtml)

The FMIX has flood hazard mapping information and products that may be reviewed online and downloaded at [http://msc.fema.gov](http://msc.fema.gov). For map orders and questions call 1-877-FEMA MAP.

For information about floodplain management, ordinances, or map adoption policies, communities can contact their State NFIP Coordinator.

For questions specifically concerning insurance, please call 1-800-427-4661 or visit [http://www.floodsmart.gov](http://www.floodsmart.gov).

What is the NFIP?

Congress established the National Flood Insurance Program (NFIP) due to escalating costs to taxpayers for flood disaster relief. The NFIP is based on the agreement that if a community practices sound floodplain management, the Federal Government will make flood insurance available to residents in that community. FEMA maps include the Special Flood Hazard Area (SFHA), which is the area that has a 1% or greater chance of flooding in any given year. Development may take place within the SFHA provided that it complies with local floodplain ordinances that meet NFIP criteria.

What is a FIRM?

When FEMA maps flood hazards in a community or county, two products are produced – a Flood Insurance Study (FIS) report and a Flood Insurance Rate Map (FIRM). An FIS report is a narrative of the community’s flood hazards that contains prior flooding information, descriptions of the flooding sources, information on flood protection measures, and a description of the hydrologic and hydraulic methods used in the study. A FIRM illustrates the extent of flood hazards in a community by depicting flood risk zones and the SFHA, and is used with the FIS report to determine the floodplain development regulations that apply in each flood risk zone and who must buy flood insurance. FIRMs also depict other information including Base (1% annual chance) Flood Elevations (BFEs) or flood depths, floodways, and common physical features such as roads.

For map orders or LOMAs, please contact the FEMA Map Information eXchange’s (FMIX) toll-free information line at 1-877-FEMA MAP (1-877-336-2627).
What else has changed?
The preliminary DFIRMs only include revised information and mapping for the Foster Joseph Sayers Lake, and Spring Creek.

How do I find out if a Structure or Property is located in the Special Flood Hazard Area?
You can locate a building or a lot by consulting the DFIRM, or by contacting the floodplain administrator for your community. For help interpreting a DFIRM, telephone the FEMA Map Information eXchange (FMIX) at 1-877-FEMA-MAP (1-877-336-2627).

What is an Appeal?
Some flood studies result in new or revised flood hazard information. During the 90-day appeal period, community officials and others may object to the accuracy of this flood hazard information, which may include new or revised BFEs, base flood depths, SFHA boundaries or zone designations, or regulatory floodways. All appeals must be based on data that show the new or revised flood hazard information is scientifically or technically incorrect. Communities should coordinate with the FEMA Philadelphia office before submitting an appeal.

What is a Comment?
Challenges received during the appeal period that do not involve proposed flood hazard information are called 'comments'; these generally involve concerns with updated corporate limits, jurisdictional boundaries, road names, and other base map errors or omissions; or requests that a Letter of Map Amendment (LOMA), Letter of Map Revision Based on Fill (LOMR), or LOMR be incorporated.

What Happens After the Appeal Period?
FEMA will issue a Letter of Final Determination and then provide the community with six months to adopt up-to-date floodplain management ordinances. If the floodplain ordinances in effect are satisfactory, they can be submitted in their current form. If ordinances need to be updated, communities should seek assistance from their State NFIP Coordinator or the FEMA office in Philadelphia. After the six-month compliance period, the new FIS and FIRMs will become effective.

Flood Hazard Mapping Fact Sheet

Centre County, Pennsylvania (PMR)  August 16, 2013

The Mapping Process
The key steps in the mapping process are outlined below. Additionally, the points at which community officials and property owners may provide comments and express concerns with the information in the FIS report and DFIRM are highlighted below.

What if a Structure is Shown in a Different Flood Zone on the New Map?
The new map will not affect continuing insurance policies for a structure built in compliance with local floodplain management regulations and the flood map in effect at the time of construction. However, should the structure be substantially improved or substantially damaged (where damages or improvements reach 50% or more of the predamage market value) the entire structure will have to be brought into compliance with the floodplain requirements and the BFE in effect at the time any repairs take place.

Is There any Recourse if I Do Not Agree with the New Map?
Although FEMA uses the most accurate flood hazard information available, limitations of scale or topographic definition of the source maps used to prepare the DFIRM may cause small areas that are at or above the BFE to be inadvertently shown within SFHA boundaries. Such situations may exist in the community. For these situations, FEMA established the LOMA process to remove such structures from the SFHA.

How can I request a LOMA?
To obtain a LOMA, the requester must complete a LOMA application form that is downloadable from: http://www.fema.gov/plan/prevent/fhm/dl_mt-ez.shtml. For a LOMA to be issued removing a structure from the SFHA, federal regulations require that lowest adjacent grade be at or above the BFE. There is no fee for FEMA’s review of the LOMA request, but the requester of a LOMA must provide all of the information needed for a review. Elevation information certified by a licensed surveyor is often required if an elevation certificate is not available.

Will LOMAs issued under the Old Map be valid under the New Map?
When a new DFIRM becomes effective, it automatically supersedes previously issued LOMAs, LOMRs, and other map changes that have been issued for structures and properties on the revised DFIRM panels. Recognizing that some map changes may still be valid even though the flood hazard information on the DFIRM has been updated, FEMA has established a process for revalidating such map changes.

Why Are the Maps Being Updated?
The digital Flood Insurance Rate Maps (DFIRMs) for Centre County, Pennsylvania are being updated with the Accreditation of the Howard Levee System and the de-accreditation of the Spring Creek Levee System. The update is known as a Physical Map and the Accreditation of the Howard Levee System and Centre County, Pennsylvania are being updated with updated corporate limits, jurisdictional boundaries, road names, and other base map errors or omissions; or requests that a Letter of Map Amendment (LOMA), Letter of Map Revision Based on Fill (LOMR-F), or LOMR be incorporated.

The U.S. Army Corps of Engineers (USACE) constructed the Howard Levee, which is part of the Foster Joseph Sayers Project, and this levee is now shown as protecting the area behind it from the 1-percent-annual-chance event in the revised FIS and DFIRMs. The Spring Creek Levee, constructed by the Pennsylvania Fish and Boat Commission, is de-accredited, and the area behind the levee now mapped as Zone AE in the revised DFIRM. The digital files will be available when these maps become effective.
